PROFILE

Software Engineer II with 4.5+ years of experience across game development and backend engineering. Currently building high-performance, fault-tolerant flight-booking APIs and supplier integrations at udChalo, where new supplier onboarding now drives 200–250 bookings/day and a delay-detection product I built sells 200+ care products/day. Prior experience in AAA game development at Ubisoft, shipping large-scale gameplay systems and data-driven features used by 1M+–2M+ players. Strong in performance optimization, debugging complex production systems, and collaborating cross-functionally to deliver reliable, user-focused solutions.

EDUCATION

Army Institute of Technology (AIT) <i>B.E. – Information Technology, GPA: 9.11 (First Class with Distinction)</i>	Pune, India 2017 – 2021
Rawal Convent School (CBSE) <i>12th: 94.2% — 10th: 9.4 CGPA</i>	Faridabad, India 2013 – 2016

TECHNICAL SKILLS

Languages: C++, JavaScript (TypeScript), Java
Backend & APIs: Node.js, REST APIs, Microservices Architecture
Cloud & Infrastructure: AWS (Lambda, DynamoDB, SQS), Redis
Android Development: Java, XML (UI layouts)
Tools: Git, Postman, Perforce
Profiles: [GFG](#), [Codeforces](#), [LeetCode](#), [SSRN](#), [CSI Coding Contest](#), [GitHub](#)

EXPERIENCE

Senior Software Engineer (Backend) <i>udChalo</i>	Feb 2026 – Present <i>Pune, India</i>
- Led end-to-end integration of Akbar Travels, TripShop, and Fly91 as new flight suppliers in udChalo's app — built search, pricing, session/token management, booking, ancillaries, and cancellation flows across supplier microservices and core flight APIs; enabled defence/LTC inventory on production with zero-downtime rollout, together driving 200–250 bookings/day across all three suppliers. - Built Trip Delay Care, a real-time flight delay detection and automated notification system that tracks live flight status and proactively alerts affected passengers, triggering compensation/assistance workflows on delay — now selling 200+ care products every day. - Implemented Frequent Flyer (Air India) support in the booking pipeline — passenger FF capture, validation, supplier payload mapping, and persistence — improving loyalty booking completion for Air India itineraries. - Architected and owned Manage Booking / Saved Booking end-to-end — lets users “cart” a selected flight and come back to it later; built a new Reprice API that fetches live, up-to-date fares before checkout, alongside the bookingInProgress lifecycle, duplicate-itinerary deactivation, 4-hour save window, and departure-based eligibility filters — so users always complete their saved booking at the latest accurate price. - Built a Resume Booking drop-off recovery API: detects users who abandon at the PCI (payment) page after adding multiple add-ons, and triggers a notification letting them resume straight to PCI with add-ons stripped — checkout with just the flight plus convenience fee — recovering an extra 60–70 bookings/day. - Owned and led udChalo Games end-to-end (www.udchalo.com/games) — an in-app mini-games suite built to boost user engagement and reward frequent travelers — now bringing 300–400 new users/day to play. - Resolved production bugs across search, price, save, and book flows during Akbar go-live; improved error handling, fare edge cases, and booking stability under load.	
Gameplay Programmer <i>Ubisoft Entertainment Pvt. Ltd.</i>	April 2025 – Feb 2026 <i>Pune, India</i>
- Engineered a robust immunity system affecting over 1M players, enabling real-time toggling of entity protection states with dynamic UI feedback and disengage logic — empowering designers with flexible gameplay tuning. - Developed a runtime AI weapon-switching system for fort-based combat, supporting data-driven pattern definitions by designers. Reduced scripting overhead by 40% and streamlined QA debugging through custom debug toggles. Used in 200K+ weekly battles.	

Junior Programmer

July 2021 – March 2025

Ubisoft Entertainment Pvt. Ltd.

Pune, India

- Designed and implemented UI features for the Rocksmith Tuner Android app including Share, Rate Us, and Eco Mode. Improved onboarding and boosted installs by **15–20%** across **50K+ Monthly Active Users**.
- Built a modular contract and event system for live content, allowing players to join, abandon, and complete events with state-aware notifications. Scaled to **2M+ users** and cut redundant alerts by **60%**.
- Enhanced the in-game map journal with filterable tabs and categorized views, improving seasonal content navigation for **2M+ players**.
- Developed a data-driven AI behavior engine supporting designer-defined combat logic like mine formation spawning and contributor-specific targeting. Enabled rich combat encounters across **500K+ battles**.
- Added intuitive UX feedback for Photo Mode screenshot saves, improving user experience for **2M+ players**.
- Created in-game analytics hooks for AI, item usage, and player performance, enabling live telemetry and balancing for **2M+ players**.
- Resolved **120+** critical UI/UX and gameplay bugs on Ubisoft's AAA title *Skull & Bones*, contributing to improved stability, visual polish, and player experience.

SIDE PROJECTS

Power Tic Tac Toe

Java/XML

- Architected a power-based Tic Tac Toe game with abilities like bomb, shield, and swap for added strategy. Includes PvP and PvAI modes. Monetized with Google AdMob.

Loop Tap Reflex Game

- Built a two-player reflex-based tap game with rotating targets and dynamic timers.
